

TOPCAT

Tool for Operations on Catalogues And Tables

STILTS

Starlink Tables Infrastructure Library Tool Set

Jean-Baptiste Marquette - IAP
Virtual Observatory Tools and their applications workshop
June 16-18, Krakow, Poland

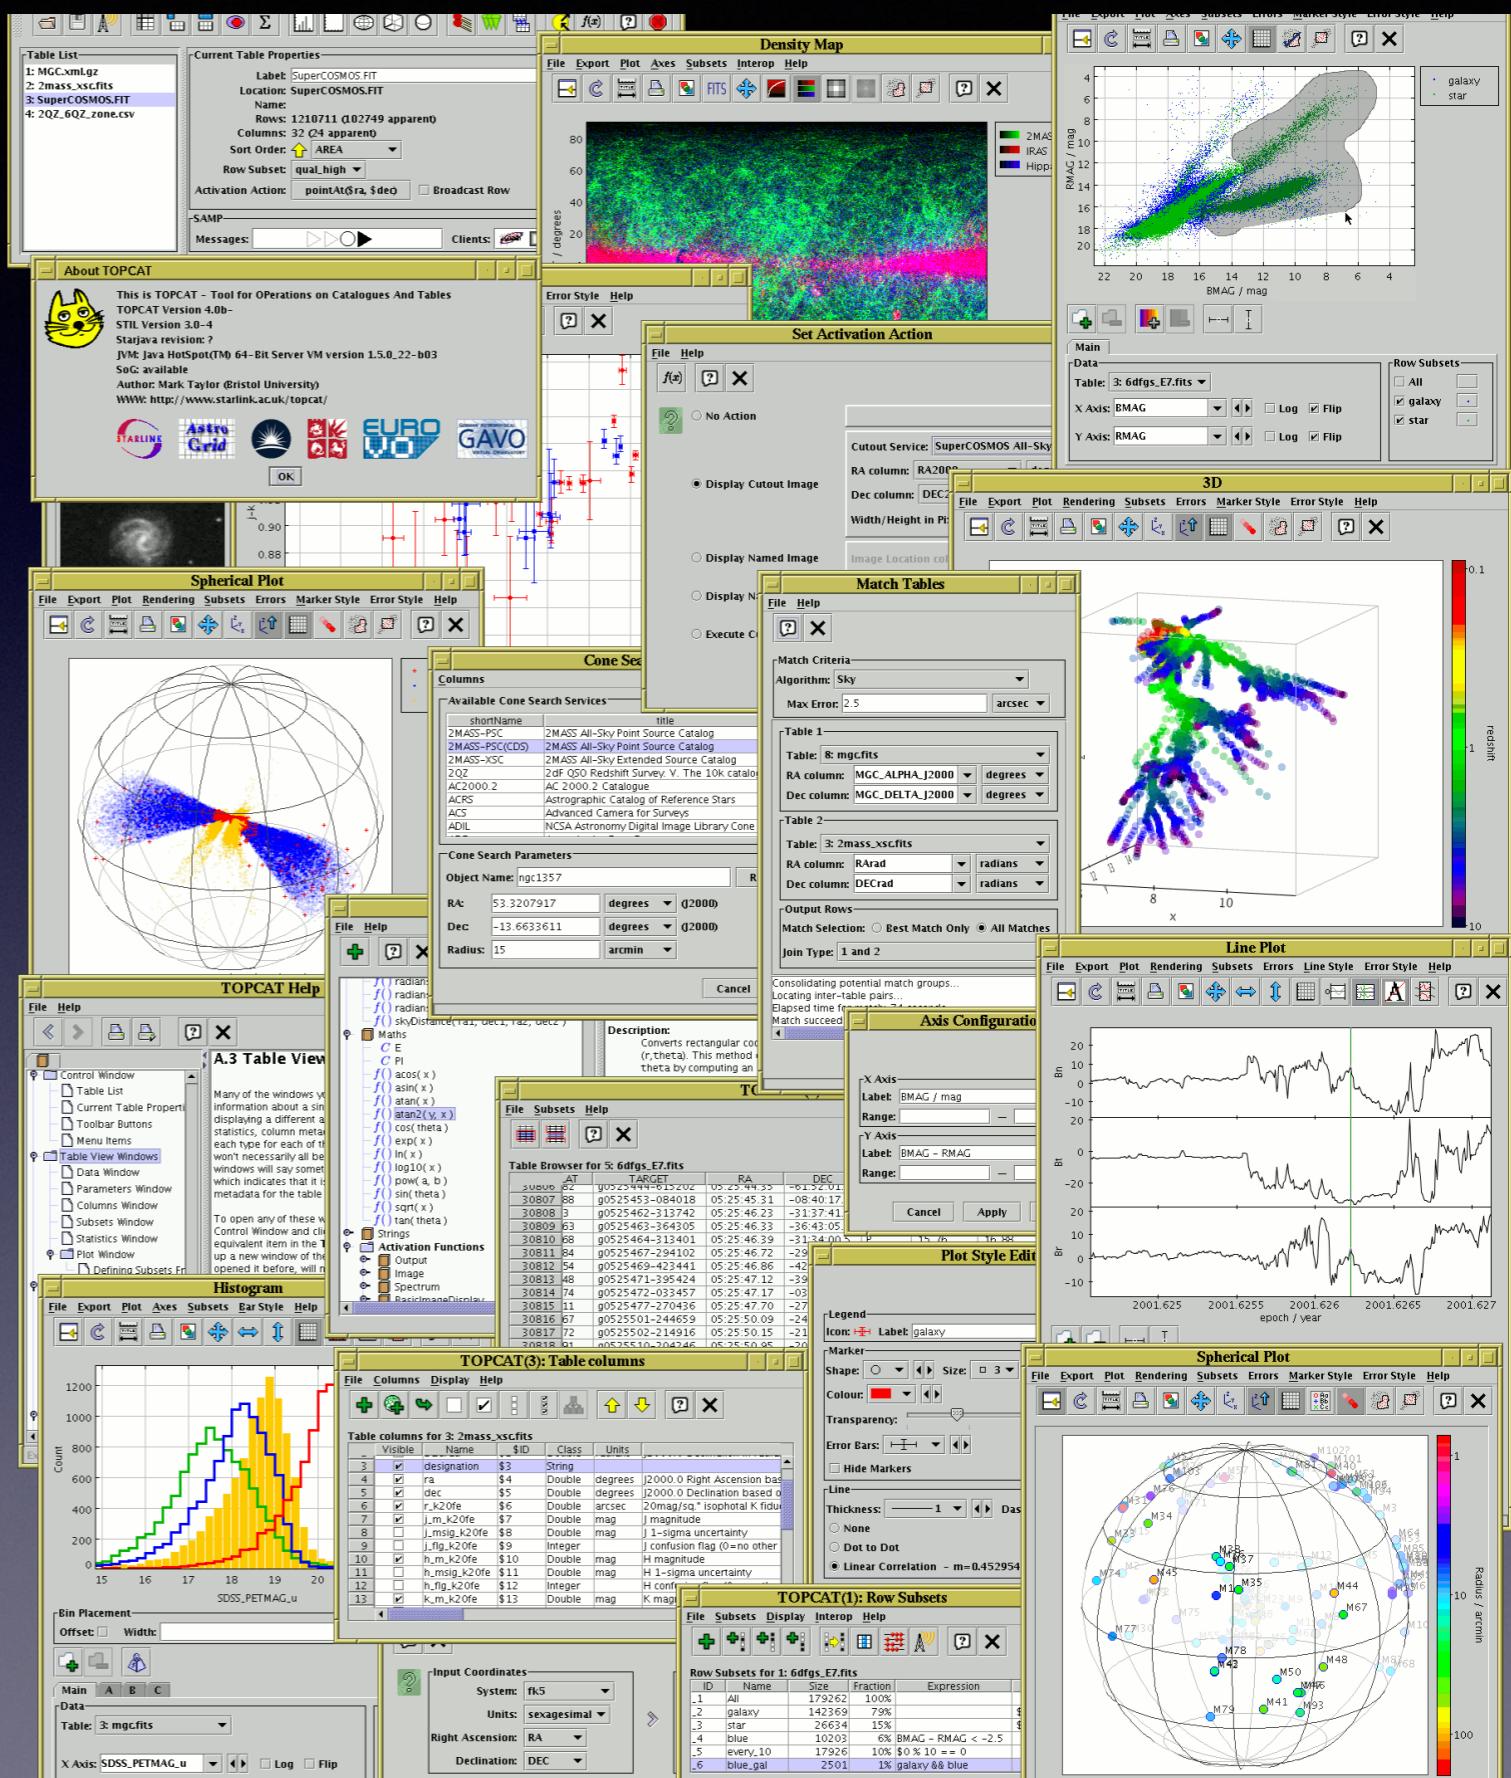

As seen from a user's side!

Some facts

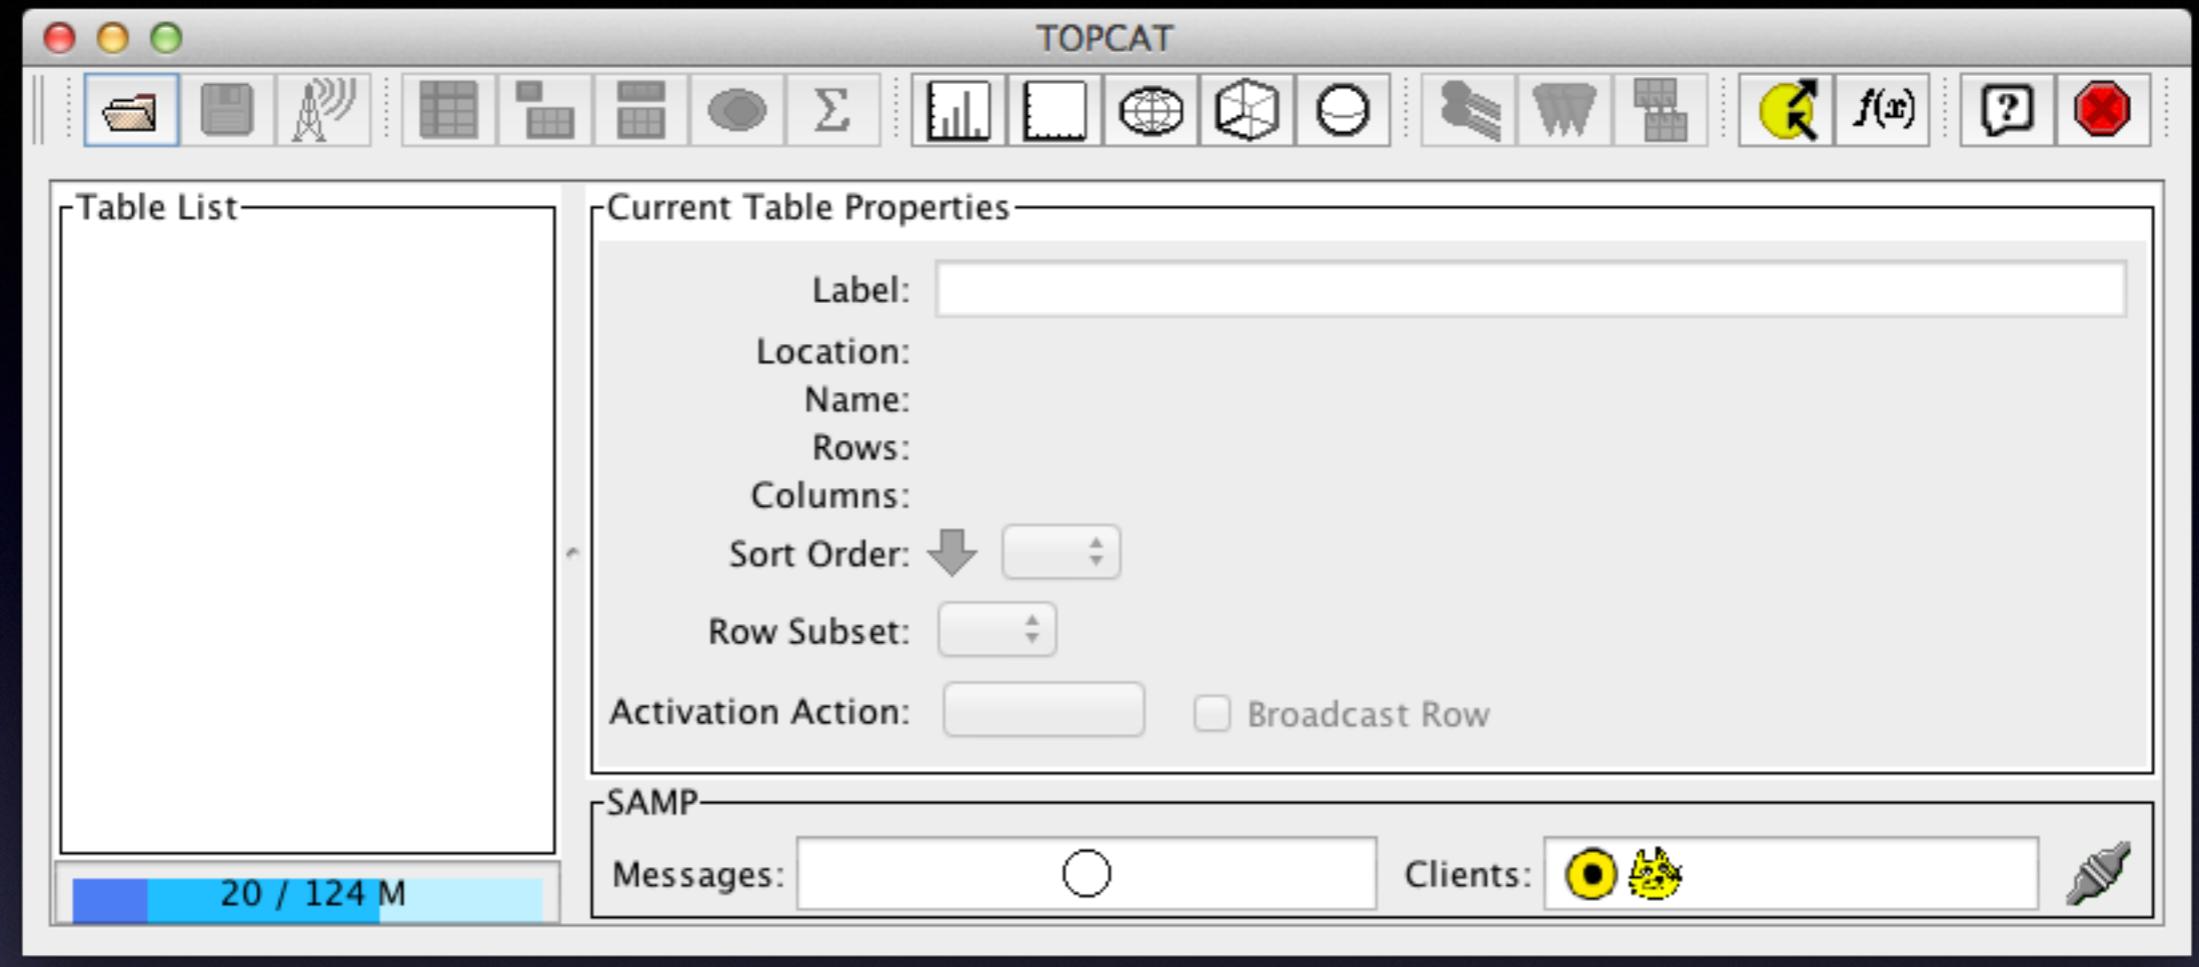

- Originally in the Starlink project, which is now at JAC:
<http://starlink.jach.hawaii.edu/starlink>
- Written in pure Java
- THE developer and expert: **Mark Taylor**
Astrophysics Group, Physics Department, Bristol University
<http://www.star.bris.ac.uk/~mbt/topcat/>
- Mailing lists for TOPCAT and friends at
<http://www.star.bris.ac.uk/~mbt/topcat-lists.html>
- Latest version: 4.1, released 7 March 2014, new-style plot windows, now recommended over the old-style ones
- Seamlessly integrated with other tools, services and datasets in the VO world and beyond

Welcome to a better world... (from Mark Taylor's web page)

- The graphical TOPCAT capabilities at a glance
- Allows interactive analysis of tabular data, both local and remote
- A great versatility in terms of formats, to be read and written: FITS, CSV, VOTable, CDF, ASCII, etc.
- Self-documented functionalities, in great details and quality
- Automatic interaction between windows, according to data manipulation
- Allows interactive sessions to be saved, for further processing
- And more...

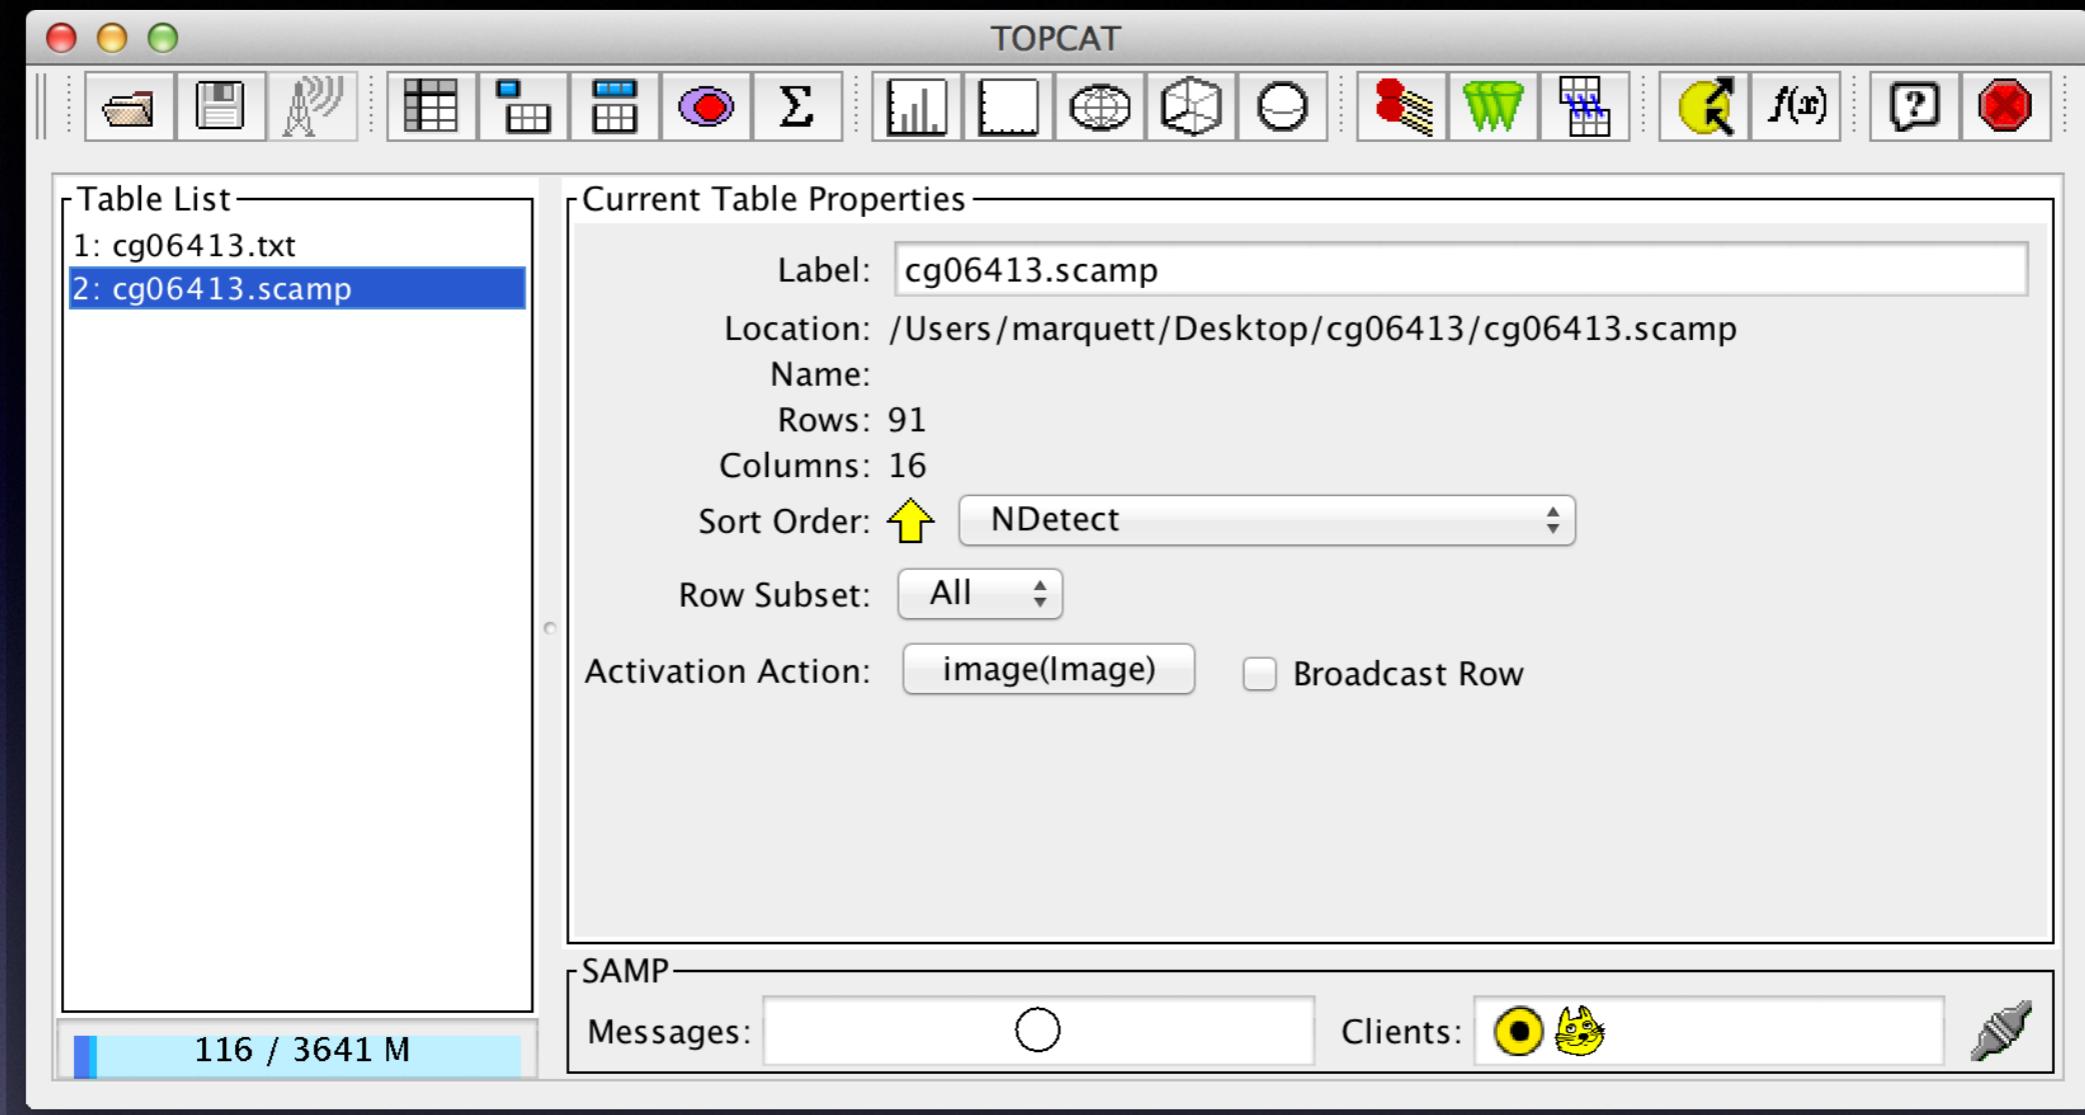

The main window

- Detar the archive workdata.tar.gz:
`tar xzvf workdata.tar.gz`
- `cd cg06413`
- contains a sample of EROS-2 data (40 images with related tables and some other files)
- `your_starjava/java/bin/topcat &`
 - source `/star/etc/profile`
 - gaia &
 - explore the different formats
 - load file `cg06413.txt`
 - load file `cg06413.scamp`

Explore the main window

- select a table
- display the contents
- display the metadata
- display the stats
- define activation action
- explore the plot functionalities
- define and use subsets
- use crossmatching

TOPCAT(1): Table Browser

The SAMP mechanism

- Simple Applications Messaging Protocol
- all tools communicate with a central "Hub" process
- Let's try with GAIA (or Aladin, or ds9)
